PowerMax+

is a powerful wireless home management and security system for small commercial and residential applications. Not only does it provide immediate notification of intrusion, smoke, flood, gas leak or excess carbon monoxide. It also enables homeowners to view and control their homes and their automated systems via the Internet, both inside and out, anytime, from anywhere. Depending on the peripherals they select, PowerMax+ can pre-program lights, shades, gates and heating/cooling systems or control them by event or manually. System event reports can be sent automatically to any private phone or, through the Internet, to any computer. PowerMax+'s clear visual and voice guidance system minimizes training and support visits and maximizes customer satisfaction.

Features include

- 28 wireless zones + 2 hardwired zones
- Integral keypad with backlight
- Full visual (LCD display) and voice guidance
- Built-in diagnostics for wireless signal testing
- Hands-free, two-way communication
- Family message center
- Two (2) phone numbers for central station monitoring
- Four (4) optional presets for voice reporting of events via phone
- Connection for up to 15 X-10s and 1 PGM unit for home automation with scheduler function (units not included)
- Add up to eight (8) wireless key fobs, eight (8) remote commanders and two (2) two-way keypads without utilizing any of the 28 wireless zones
- Up to four (4) cameras for web-based surveillance
- A built-in piezo siren + two (2) external sounder outputs
- **New** on-board power for hardwired zones
- **New** timed auto-arm feature
- Fast direct upload/download connection via serial port
